

Sustainable Design in South Gippsland

The Energy Innovation Co-Operative with support from South Gippsland Shire Council has arranged a house visit to a sustainable designed house in Nyora for interested community members.

The house visit aims to provide more information on sustainable design and ideas on how to implement sustainable practices in a range of lifestyles.

Sustainable house designer Sue Mitchell and the home owner will show and explain the details of a rammed earth / radial cut timber house.

Those attending will learn the practicalities and possibilities of energy efficient design from people who live it every day.

Council's Sustainability Officer Heidi Hamm said the house visit was a perfect opportunity for community members to learn more about sustainable practices.

"It is fantastic that we have the opportunity to visit a home that has been built to a sustainable design right here in South Gippsland.

"After the success of the Small Solar Batteries in Practice information session held last month we expect a high level of interest from the community.

"Everyone interested is encouraged to book a place for the home visit. However there are limited numbers so get in quick to avoid disappointment," said Ms Hamm.

The house visit will be held on 26 March from 2.00pm to 4.00pm in Nyora. The house address will be provided upon booking. Photo identification will be required upon entry to the house for security purposes.

Please book by contacting the Energy Innovation Co-Operative at info@eico-op.com.au or by calling 0417 350 243.

Numbers are strictly limited so those interested should book as soon as possible.

Tickets are \$9 per person to attend and afternoon tea will be provided.
