

Permit to Install - After the Permit Approval

*South Gippsland
Shire Council*

Your permit is valid for two years, if you need more time you can apply for an extension

When you have engaged a licensed plumber to do the work provide them with a copy of the permit

Your plumber will need to contact Council two days prior to installing your septic system. We inspect a portion of all installations to confirm the quality of work being done

After your system is installed your plumber needs to send Council their Compliance Certificate (PCC) and arrange a final inspection. We inspect all installed systems to confirm they match approved plans

Now your system is installed, check out the helpful factsheets on Council's website to reduce the risk of costly repairs and keep your family safe
