

Coal Creek Building Works

Works to remove end-of-life structures in the lower section of Coal Creek will commence the week beginning Monday 26 October 2026.

Most of these structures were purpose-built many years ago for a farm display that is no longer operating. These structures are not considered to have historical or heritage significance and are located outside the Heritage Overlay that covers the upper section of the Park. They have also deteriorated over time and are beyond reasonable repair, with some now presenting safety hazards and are beyond repair.

This removal will allow resources to be focused on structures and facilities that are accessible to the public and add to the visitor experience and direction of Coal Creek.

There will be no disruptions to the ordinary operation of Coal Creek whilst these works are being undertaken.

Quote attributable to South Gippsland Shire Council Chief Executive Officer, Allison Jones:

"The removal of these structures gives Council an opportunity to improve the safety and presentation of the lower part of Coal Creek, while also reducing the ongoing maintenance requirements at the Park."
